Instruction Disclaimer

Dennis Kirk provides instructions to help our customers better understand how to install the products we sell. The instructions are exact copies of what the manufacturer includes with the product being sold.

That means the quality and accuracy of the instructions is solely dependent on what the manufacturer produces. We do our best to make the text legible and the pictures viewable. However, the end result depends largely on the quality of instructions the manufacturer provides.

Therefore, you will find that some instructions are not of the highest quality. Sometimes text is hard to read and pictures are not easy to see. At times you will find the overall look of the instructions to be less than professional. However, we feel it is better to provide what we have rather than provide nothing at all.

To the best of our knowledge the instructions and application information contained in the instructions is accurate. However, Dennis Kirk assumes no liability related to any errors that may be contained in the copy of the manufacturer’s instructions we provide. Buyers are solely responsible to insure that product use is consistent with their application.

If you have any questions please contact us at customerservice@denniskirk.com or 800-969-7501 so we can further assist you regarding additional product information or any other business related questions.

Thank you for doing business with Dennis Kirk.
NAMZ Plug-n-Play® Tour-Pack Power Tap Harness
Part Number: NTP-CB01

Installation Instructions:

1. BE SAFE, DISCONNECT THE BATTERY FIRST!
2. Part number NTP-CB01 is for all FL 2014-Up Ultra, Street & Road Glide Models & connects under the seat to the rear fender 6-position connection.
3. Once the main harness is connected in between the rear fender harness connection, simply route the tour pack harness towards the seat bolt on the rear fender & reinstall the seat.
4. The tour pack harness connector should now be exposed & easily accessible behind the seat.
5. Now install your tour pack and simply connect the mating 6-position connector to the newly installed harness.
6. Reconnect the battery & test tour pack lighting.
