Instruction Disclaimer

Dennis Kirk provides instructions to help our customers better understand how to install the products we sell. The instructions are exact copies of what the manufacturer includes with the product being sold.

That means the quality and accuracy of the instructions is solely dependent on what the manufacturer produces. We do our best to make the text legible and the pictures viewable. However, the end result depends largely on the quality of instructions the manufacturer provides.

Therefore, you will find that some instructions are not of the highest quality. Sometimes text is hard to read and pictures are not easy to see. At times you will find the overall look of the instructions to be less than professional. However, we feel it is better to provide what we have rather than provide nothing at all.

To the best of our knowledge the instructions and application information contained in the instructions is accurate. However, Dennis Kirk assumes no liability related to any errors that may be contained in the copy of the manufacturer’s instructions we provide. Buyers are solely responsible to insure that product use is consistent with their application.

If you have any questions please contact us at customerservice@denniskirk.com or 800-969-7501 so we can further assist you regarding additional product information or any other business related questions.

Thank you for doing business with Dennis Kirk.
HOW TO ADJUST YOUR DANNY GRAY WITH AIRHAWK™ SEAT:

Step 1: Locate bulb pump on left-hand side of seat.

Step 2: Inflate by using the bulb pump until the cushion is visibly filled with air (5-7 pumps is a good starting point).

Step 3: If possible, sit on the seat in your normal upright riding position with both feet on pegs. This may require assistance.

Step 4: IMPORTANT! Adjust the air by pressing the button located near the pump. Release air until you sink down into the seat. NOTE: This product works most effectively with a minimal amount of air.

Step 5: Check that you have not let all the air out of the cushion by slowly leaning your body (not your bike) from side to side. Readjust as necessary.

⚠️ NOTE: Use caution if adjusting while operating your vehicle.
