Instruction Disclaimer

Dennis Kirk provides instructions to help our customers better understand how to install the products we sell. The instructions are exact copies of what the manufacturer includes with the product being sold.

That means the quality and accuracy of the instructions is solely dependent on what the manufacturer produces. We do our best to make the text legible and the pictures viewable. However, the end result depends largely on the quality of instructions the manufacturer provides.

Therefore, you will find that some instructions are not of the highest quality. Sometimes text is hard to read and pictures are not easy to see. At times you will find the overall look of the instructions to be less than professional. However, we feel it is better to provide what we have rather than provide nothing at all.

To the best of our knowledge the instructions and application information contained in the instructions is accurate. However, Dennis Kirk assumes no liability related to any errors that may be contained in the copy of the manufacturer’s instructions we provide. Buyers are solely responsible to insure that product use is consistent with their application.

If you have any questions please contact us at customerservice@denniskirk.com or 800-969-7501 so we can further assist you regarding additional product information or any other business related questions.

Thank you for doing business with Dennis Kirk.
Vision Wheel Inc.
Recommended Care and Maintenance of Wheel Products

As with any automotive products, the level of care and maintenance provided by the owner is key to its continued service and ability to retain the high appearance values intended for its automotive service life. Please follow these important suggestions and instructions to assure the continued high luster and finish of your Vision Wheel Inc. wheel products. Improper maintenance, lack of cleaning or improper cleaning, can and will cause the Limited Warranty to be voided. These recommendations apply for all normal wheel finishes, including painted and chrome plated.

Regular cleaning is very important, to remove road soils, brake dust, road chemicals, and road salts. These materials can trap moisture against the finish surface, causing a corrosive action to begin, causing pitting and deterioration of the finish. This is true for all surfaces of the wheel and all surfaces (front and rear) should be thoroughly cleaned. Always use a mild soap and warm water, with a soft cloth or brush, and never use any harsh or abrasive chemical cleaners, especially those offered by most automatic car wash operations. Always allow the wheels to cool to ambient temperature before starting to clean. Even mild soaps can cause the finish to stain, discolor or shadow, if applied to wheels at elevated temperatures.

The frequency of the cleaning, beyond the correct method of cleaning, is also very important to the life of the finish. For best results, the wheel should be cleaned after each detrimental exposure. If this is not reasonably possible, they should be cleaned as soon after and as frequently, as possible. The sustained life of the finish can be directly related to the frequency of the care and maintenance of the wheel product.
